

Adriatic Health Tourism

European Commission

Public consultation on EU funds in the area of cohesion

This Document was uploaded on March the 7th 2018

Introduction

Medical Group Ltd. (Croatia) developed the initiative ADRIATICHEALTH – the platform with aim to create and establish the conditions for a quality and safe full time stay of tourists in Croatia and the Adriatic region; also the goal is to brand the destination and to present it as a desirable investment destination, as well as the touristic friendly, health friendly destination open for the development of silver generation tourism especially. With the involvement in the Cohesion Initiative EU policy, within the EU Commission, or in the "EU Cohesion Funds Advisory Forum" Medical Group wants to present its proposals in the area of complementarity of objectives / programs / funds.

Having in mind the importance of regional cooperation as the value of the EU, we believe that one is also indispensable for the desired development of **health and tourism projects** and perception of the Adriatic region as a destination that offers both – investment opportunities and touristic and health facilities.

Adriatic region as the full time Riviera of Europe is the main goal we are heading to, and we believe it can be achieved by the integration of health tourism into the European Operational Programs with the priority sections related.

Also, the development of competitive niche markets and new directions such as Senior Tourism (and Silver Economy) as the branch of health tourism can create an additional value in tourism itself.

Moreover it plays a role in diversification of the tourist content which is completely independent of the main season frames; of course, consequently contribute to the development of the full-time tourism.

It is important to promote and implement the activities that are yet not sufficiently represented in programs of cohesion policy - such as healthcare and health tourism and that can make multiple benefits, both for the states and citizens of the region, as well as for the development of the Adriatic region as a whole.

Our goal here is to introduce the new specific content, i.e. the activity that should be developed on the EU level and that can have a major impact on both, the EU economics globally, and on individual countries and their development in the region.

The Platform Adriatic Health Tourism is as follows:

1. *Adriatic* Health Tourism Platform

The general idea of the program is to promote and develop the Adriatic region as the all year round destination for tourism and health by stimulating and fostering the structural projects and concepts (health and tourism infrastructure, new equipment and technology ...), promoting sustainable development of health tourism (by creating new senior residences and residential care homes i.e. assisted living facilities with health infrastructure related), encouraging and promoting investments in education and creating new curricula and nomenclature of occupations and education in health tourism, promoting the integration of three health tourism components in the **total**

touristic offer (medical tourism, SPA tourism and medical wellness) and developing statistical data for all three health tourism components related to tourism in the European Union (EU).

The Adriatic Health Tourism Platform is:

- The New Financial Framework (New Financial Period) after 2020 with the EU Budget
- Concentration on Adriatic Region (Adriatic Sea) and wider - inclusion of regions of Italy, Slovenia, Croatia, Serbia, Bosnia and Herzegovina, Montenegro and Albania
- Bigger - EUR 3 billion ERDF and EUR 800 million IPA funding, co-financing rate of 65-85%
- More focused - 6 priority axes for the development of the Adriatic region
- Appropriate care and care for the elderly and social inclusion
- Closer to the territory - special attention to the private sector (SMEs) and health and health tourism institutions
- New development perspective of the Adriatic region with the aim of encouraging the creation of new jobs and employment, the prevention of population emigration and the reduction of the negative demographic trends

1.2. Platform Area

- Eligible geographic area extends to approximately 550,000 km (around 12% of the EU area)
- More than 7 000 km of a maritime coastline of the Adriatic Sea
- A home for more than 80 million people (15.8% of the EU28 population)
- 97 people per km² in the Adriatic region, compared to 116.3 in Europe as a whole. This average, however, masks significant disparities: population densities vary considerably from 206 people / km² in Italy to 46 persons / km² in Montenegro
- Extremely diverse natural, physical and geographical characteristics
- Mild and healthy climate, diversity of cultural and gastronomic heritage
